

CLASSIC CAR SPA CLEANS UP WITH MATTOP CHAIN

One of the advantages is that workers can move right along with the car, so it is easier on them and more efficient, says Rick Stertz of Classic Car Spa

Rexnord® 6995 MatTop® Chain on AVW Transporter™ dual lane exterior car wash conveyor.

Rexnord® 6900 Series MatTop® Chain plays a big role in Classic Car Spa's upscale car care facilities. At the firm's hand wash and detail operations in Phoenix and Tucson, It provides a wide moving surface that eliminates the need to steer the driver's side tire onto the conveyor and provides workers with a slide-resistant, floor-like surface to walk on, without pinch points, guide rails and rollers they could trip over.

Built-in pushers carry vehicles onto the conveyor, through the car wash and off the conveyor while in Neutral. With all wheels on top of the conveyor, braking and steering problems are eliminated. The chain has no guide rails that can damage tires and rims. With it, there are no vehicle size limitations, so large vans, SUVs and "dually" pickups are no problem. The simple design also helps reduce operating costs, because there is no maintenance required after installation. The conveyor drive and tail shafts are the only moving parts.

The pushers are only two inches high, it can handle cars with low-profile tires and minimal ground clearance. The conveyor design makes it easy to load vehicles of any width or tire size, and customers appreciate its bright, clean look that enhances their car care experience.
